1. Welcome to PipAlgo Copier

PipAlgo Copier lets you automatically copy trades from a professional signal provider straight into your own MT4 or MT5 account — in real time, with no manual clicking required. Whether you're running a demo account to test things out or a funded live account, the setup takes just a few minutes.

This guide walks you through the entire journey: creating your account, connecting your trading terminal, choosing a plan, and getting the most out of your dashboard.

Note: Demo accounts copy trades completely free, forever. You only need a paid plan once you connect a real, funded account.

What You'll Need

- An MT4 or MT5 trading account (demo or real) with a broker that allows Expert Advisors (EAs)
- 5 minutes to install the Slave EA on your terminal
- For real accounts: a small crypto payment to activate your chosen plan

2. Creating Your Account

1. Go to the PipAlgo Copier website and click Get Started.
2. Fill in your full name, email address, country, and a password (minimum 8 characters).
3. Submit the form — you'll be logged in automatically and redirected to your dashboard.

You'll also receive a welcome email confirming your registration was successful, with quick links to get started.

3. Demo vs Real Accounts

PipAlgo Copier supports two kinds of trading accounts, and it's important to understand the difference before you connect anything:

	Demo Accounts	Real Accounts
Cost	Free, forever	Requires an active paid plan
Purpose	Test the copier risk-free	Live trading with real funds
Account limit	Up to 5 demo accounts	Depends on your plan (1–10 accounts)
Setup	Same Slave EA, same steps	Same Slave EA, same steps

We recommend starting on a demo account so you can see trades copying correctly before committing real capital.

4. Connecting Your MT4/MT5 Account

Before installing the EA, you need to register your trading account on the dashboard so the system can issue you a Copy Token — a unique key that links your MT4/MT5 terminal to the copier server.

Steps

1. From your dashboard, go to My Accounts and click Add Account.
2. Enter your account number, choose MT4 or MT5, select Demo or Real, and pick your broker.
3. Choose which master signal you want to follow.
4. Set your lot sizing preference (see Section 7 for details).
5. Save — your unique Copy Token will appear on the account row. Keep this safe; you'll paste it into the EA in the next step.

Good to know: Every time you attach a new account, our team is notified automatically so we can keep an eye on things and make sure everything is running smoothly for you.

5. Downloading & Installing the Slave EA

The Slave EA is the small piece of software that runs on your MT4/MT5 terminal, checks for new trades every few seconds, and executes them automatically on your account.

5.1 Download

Go to the Download EA page and download the correct file for your platform:

- PipAlgo_Slave_MT4.ex4 — for MetaTrader 4
- PipAlgo_Slave_EA.ex5 — for MetaTrader 5

5.2 Install

1. In MetaTrader, go to File → Open Data Folder.
2. Open the MQL4 (or MQL5) folder, then the Experts folder.
3. Copy the downloaded EA file into that folder.
4. Back in MetaTrader, right-click Expert Advisors in the Navigator panel and choose Refresh.

5.3 Allow WebRequest (Important)

The EA needs permission to talk to our server. Without this step, it will not work.

1. Go to Tools → Options → Expert Advisors.
2. Tick Allow WebRequest for listed URL.
3. Add this exact address to the list: <https://copier.pipalgo.co.za>

Common mistake: If you skip this step, the EA will show a WebRequest error in the Experts tab and will not connect.

5.4 Attach to a Chart

1. Drag the EA from the Navigator onto any open chart — the symbol and timeframe don't matter.
2. In the Inputs tab, paste your Copy Token into the CopyToken field.
3. Click OK.
4. Make sure AutoTrading is enabled (the button in the toolbar, or press F7).

6. Verifying the EA Is Working

Once attached, check the Experts tab at the bottom of your terminal. Within a few seconds, you should see a line similar to:

```
[PipAlgo Slave5] Init OK | Account: real | Master: PipAlgo | Direction: same
```

On your dashboard, the account should also show as Online, and the on-chart panel will display live stats — polls, trades executed, and any errors.

Troubleshooting: If you don't see this message, double-check the WebRequest URL from Section 5.3 and confirm your Copy Token was pasted correctly with no extra spaces.

7. Understanding Lot Sizing Modes

You control how much of the master's trade size gets copied to your account. This is set per-account under My Accounts → Edit.

Mode	How it works	Best for
Fixed	Every copied trade uses the exact same lot size you set, regardless of the master's size.	Predictable, constant risk per trade
Multiplier	Copied lot = master's lot × your chosen ratio (e.g. 0.5× copies at half size).	Scaling risk up or down proportionally
Proportional	Currently behaves the same as Multiplier — copied lot = master's lot × ratio.	Same as Multiplier

Martingale strategies: If the master strategy uses martingale (increasing lot size after a loss), always use Multiplier mode, not Fixed. Fixed mode flattens every trade to the same size and breaks the recovery math the strategy depends on. Multiplier mode preserves the exact same escalation pattern, just scaled to your risk level.

You can also set a Max Lot cap — this protects your account from an unusually large signal by capping the copied size, no matter what the multiplier calculates.

8. Subscription Plans & Pricing

Plan	Price	Duration	Max Real Accounts
Demo Free	\$0	Forever	5 (demo only)
Starter	\$14	30 days	1
Standard	\$35	30 days	3
Pro	\$70	30 days	7
Annual Pro	\$599	365 days	10

Upgrade-Only Policy

Once you have an active paid plan, you cannot repurchase the same plan or downgrade to a cheaper one while it's still active — you can only upgrade to a higher tier. For example, if you're on the Pro plan, the Starter and Standard options will be locked until your Pro plan expires, but you can still upgrade to Annual Pro at any time.

Note: This prevents accidentally overlapping or wasting a payment on a plan you're already covered by. Your dashboard clearly marks your active plan and greys out any options that aren't available.

9. Making a Payment

All plans are paid in cryptocurrency. Here's the process:

1. Go to Payments from your dashboard sidebar.
2. Choose the account you're activating and select your plan.
3. Pick your preferred coin (BTC, ETH, USDT, etc.) and network.
4. Copy the displayed wallet address and send the exact amount shown.
5. Paste your transaction hash (TXID) from your wallet or exchange into the form.
6. Click Submit Payment.

Note: Payments are reviewed and confirmed manually, typically within 1–2 hours. You'll see the status update from Pending to Confirmed in your Payment History once approved, and your account will activate automatically.

Each transaction hash can only be submitted once — make sure you copy it exactly from your wallet.

10. Telegram Notifications

You can link your Telegram account to receive renewal reminders before your plan expires, so your trades never stop copying due to a missed payment.

1. Message [@cmfxtrading](https://t.me/cmfxtrading) on Telegram and include your account number.
2. Our team will manually link your Telegram chat to your account.
3. Once linked, you'll automatically receive a reminder around 3 days before your subscription expires.

Note: This step is optional. You'll always receive renewal reminders by email regardless of whether Telegram is linked.

11. Managing Your Dashboard

My Accounts

View and edit every connected MT4/MT5 account, adjust lot settings, and grab your Copy Token at any time.

Trade History

See every trade copied to your account — executed, failed, or skipped — along with symbol, direction, lot size, and timestamp. Summary cards show your total Executed, Failed, Buys Copied, Sells Copied, and overall Success Rate.

Settings

Update your Telegram username, change your password, or request account deletion.

12. Troubleshooting & FAQ

The EA shows a WebRequest error

Add <https://copier.pipalgo.co.za> to Tools → Options → Expert Advisors → Allow WebRequest for listed URL, exactly as shown in Section 5.3.

My dashboard shows my account as Offline

This means the EA hasn't polled the server recently — check that AutoTrading is enabled and the chart the EA is attached to hasn't been closed.

Trades aren't copying at all

Confirm your Copy Token was pasted correctly with no extra spaces, and that your account status shows Active (not Pending Payment) on your dashboard.

My lot size looks smaller than I expected

Check whether you're on Multiplier/Proportional mode — the copied lot is the master's lot multiplied by your ratio, not a fixed number. See Section 7.

I can't select a plan I want

If it shows a Locked badge, you already have an active plan at that tier or higher. You can only upgrade to something priced above your current plan until it expires. See Section 8.

My transaction hash was rejected as a duplicate

Each transaction hash can only be submitted once. If you believe this is an error, contact support with your TXID.

13. Getting Support

If you run into anything not covered in this guide, we're happy to help.

Telegram: [@cmfxtrading](https://t.me/cmfxtrading)
